

Pictorial Assent Aid: *People Powered Medicine (PPM) Study*

I am a doctor who is doing a research study. Research is when we ask people questions and do tests to learn new things.

You are 10 years old or older and have autism or an autism spectrum disorder.

We want to see if we can learn more about your disorder by looking at your health records and your social media (for example, Facebook).

You do not have to be in the study. It is okay to say no.

You can ask questions any time.

You will share your health records and your social media account with us.

If you choose, you will provide a saliva (spit) sample so we can learn more about the role your genes play in your disorder. Your parent or caregiver can help with all of this.

We will also ask you some questions about you and your life.

You can stop being in the study at any time.
